

LETTER OF RECOMMENDATION

Applicant **Herbert Ullrich**

Current field of study: **Software systems**

I have known Mr. Ullrich since autumn 2015. He then attended my bachelor Algorithms course which he completed to my satisfaction. He exhibited genuine understanding of the subject and solved the programming problems presented in the course very efficiently.

This year, Mr. Ullrich has been working under my supervision on a graph database project which is still under development. His involvement in the project reflects his current shift of interests from web programming to more demanding topics in algorithms and theoretical computer science. His solutions of particular problems which arised in the project were clear, fast and reliable and were based on his firm knowledge of more advanced graph theory themes.

The motivation of Mr. Ullrich, in my opinion, is high. He understands very well the importance of mastering university studies to his personal and professional profile and was working diligently all the time I have known him. Intellectually Mr. Ullrich is surely standing above the standard level expected from a typical student of our faculty. He easily develops insight into the problems presented on lectures and seminaries and he can discuss and solve them in clear and precise manner.

To conclude, I know Mr. Ullrich as an open, sincere person with a lot of good humour, a student who is favoured among his colleagues.

Marko Genyk-Berezovskyj , Prague, 28. 11. 2017

RNDr. Marko Genyk-Berezovskyj, assistant professor
Czech Technical University, Department of Cybernetics
